Subtracting Fractions

$$1) \quad \frac{3}{4} - \frac{5}{10} = \frac{15}{20} - \frac{10}{20} = \frac{5}{20} = \frac{1}{4}$$

$$2) \quad \frac{3}{4} - \frac{1}{3} = \frac{9}{12} - \frac{4}{12} = \frac{5}{12}$$

$$3) \quad \frac{4}{10} - \frac{1}{3} = \frac{12}{30} - \frac{10}{30} = \frac{2}{30} = \frac{1}{15}$$

$$4) \quad \frac{3}{5} - \frac{1}{2} = \frac{6}{10} - \frac{5}{10} = \frac{1}{10}$$

$$5) \quad \frac{4}{5} - \frac{1}{10} = \frac{8}{10} - \frac{1}{10} = \frac{7}{10}$$

$$6) \quad \frac{3}{10} - \frac{1}{4} = \frac{6}{20} - \frac{5}{20} = \frac{1}{20}$$

$$7) \quad \frac{3}{5} - \frac{1}{3} = \frac{9}{15} - \frac{5}{15} = \frac{4}{15}$$

$$8) \quad \frac{2}{4} - \frac{1}{2} = \frac{2}{4} - \frac{2}{4} = 0$$

$$9) \quad \frac{2}{4} - \frac{2}{5} = \frac{10}{20} - \frac{8}{20} = \frac{2}{20} = \frac{1}{10}$$

$$10) \quad \frac{4}{5} - \frac{2}{3} = \frac{12}{15} - \frac{10}{15} = \frac{2}{15}$$
